Overview

The Cooperative Institute for Research to Operations in Hydrology (CIROH) maintains CIROH Hub, a unified website that enhances discoverability of research outputs, documentation, and collaboration across the consortium.

CIROH Hub combines CIROH DocuHub (centralized documentation and technical guidance) and the CIROH Portal (community resources aggregated from external repositories) into a single platform - streamlining access, improving navigation, and increasing visibility of CIROH projects.

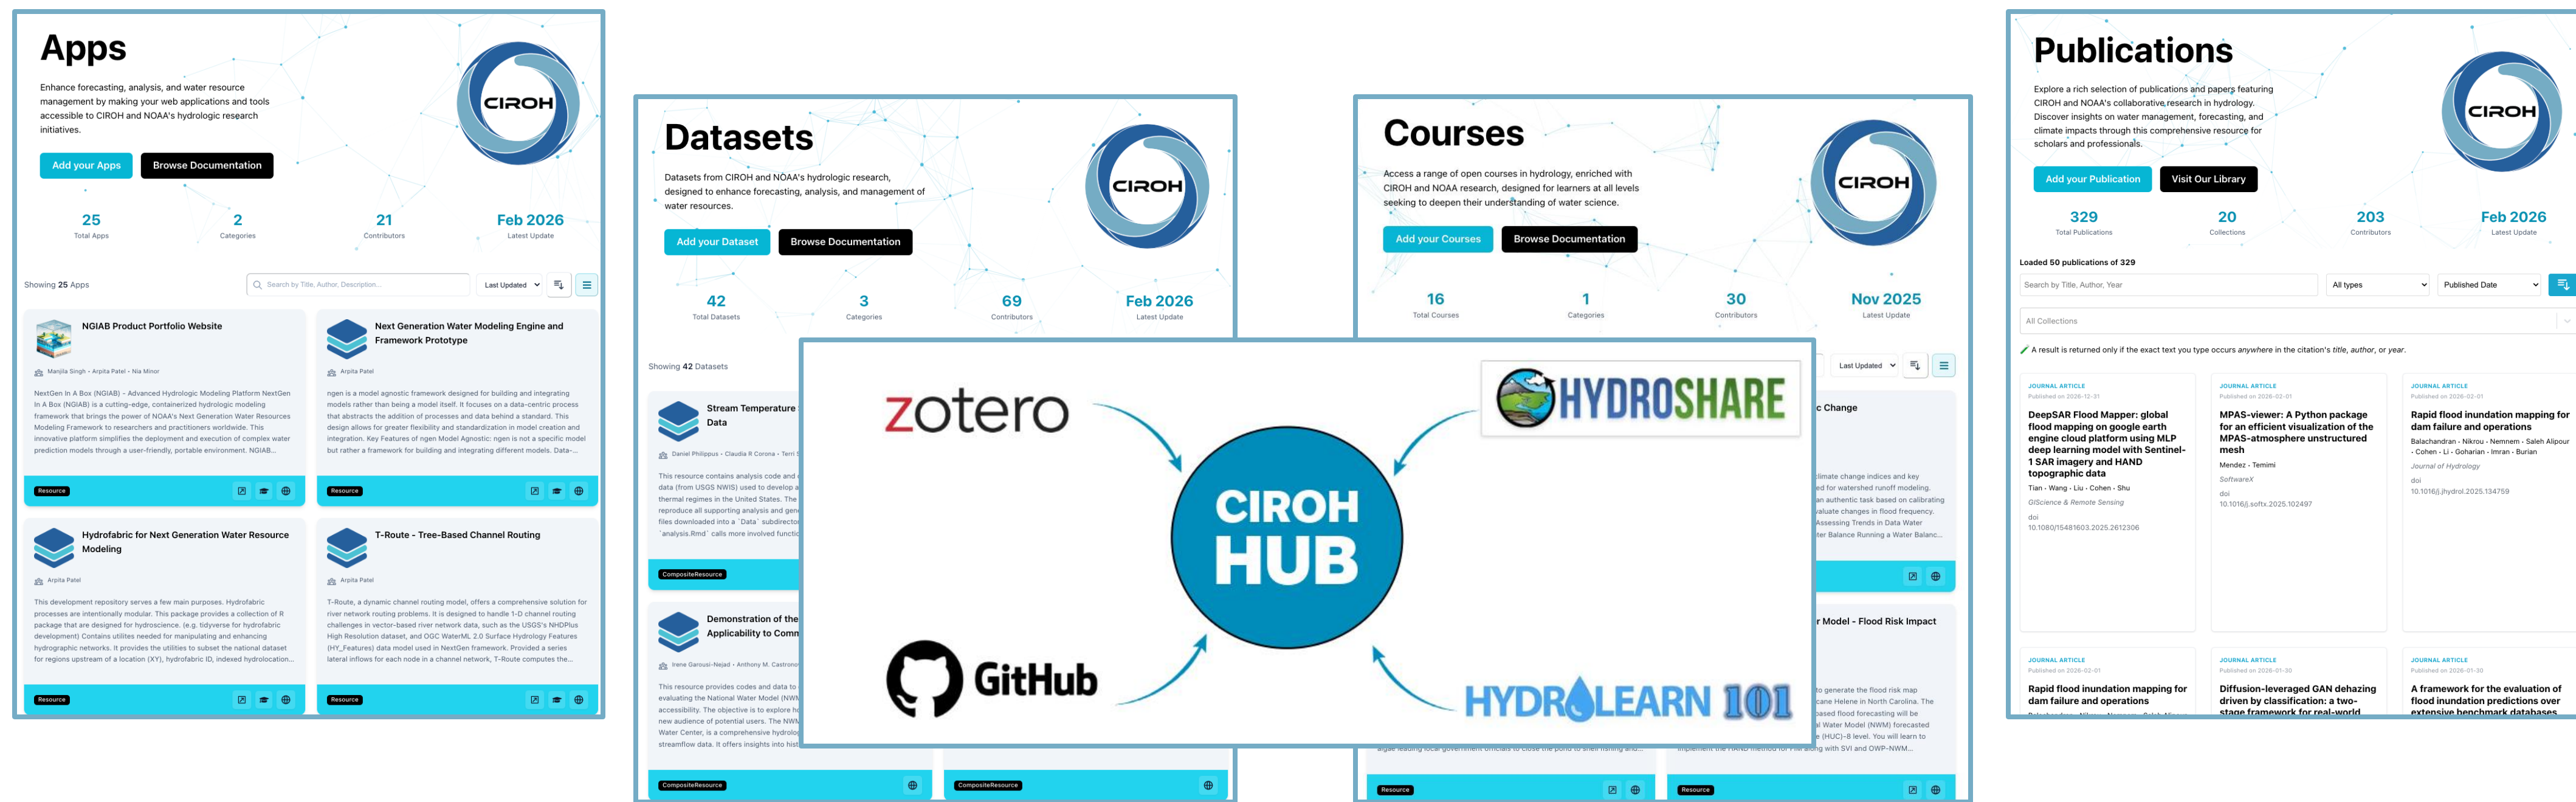

Community-Driven Content

HydroShare Resources: CIROH Hub dynamically pulls resources from HydroShare using content keywords, allowing community members to easily contribute applications, datasets, courses, presentations, and notebooks.

Documentation: The Hub hosts some documentation directly and dynamically retrieves additional content from GitHub, centralizing information and maintainers to update it independently.

Zotero Publications Collection: The Publications section is populated via the the CIROH Zotero library. This provides a simple, searchable listing of publication titles, dates, authors, journals, and DOI identifiers of all CIROH-affiliated publications.

Next Steps for CIROH Hub

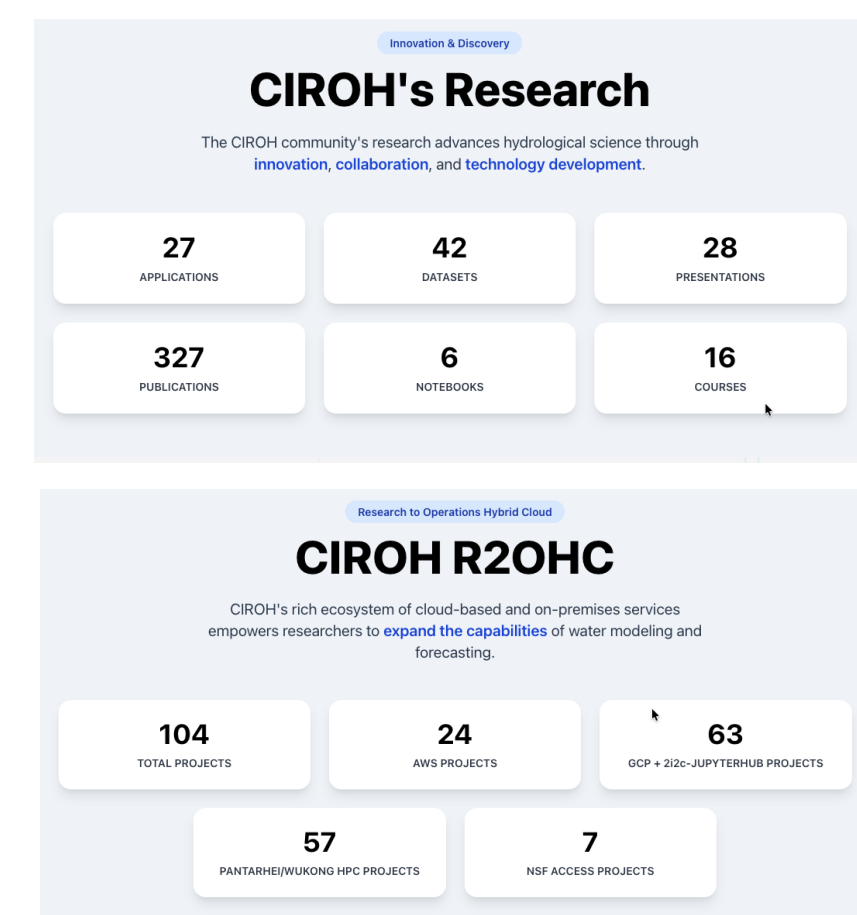

As CIROH Hub continues to grow, our focus is directed toward the following key priorities:

1. Streamline contribution workflows with improved templates for expanding catalogs of documentation, apps, datasets, tools, and publications.
2. Broaden community outreach to encourage community contributions and feedbacks.

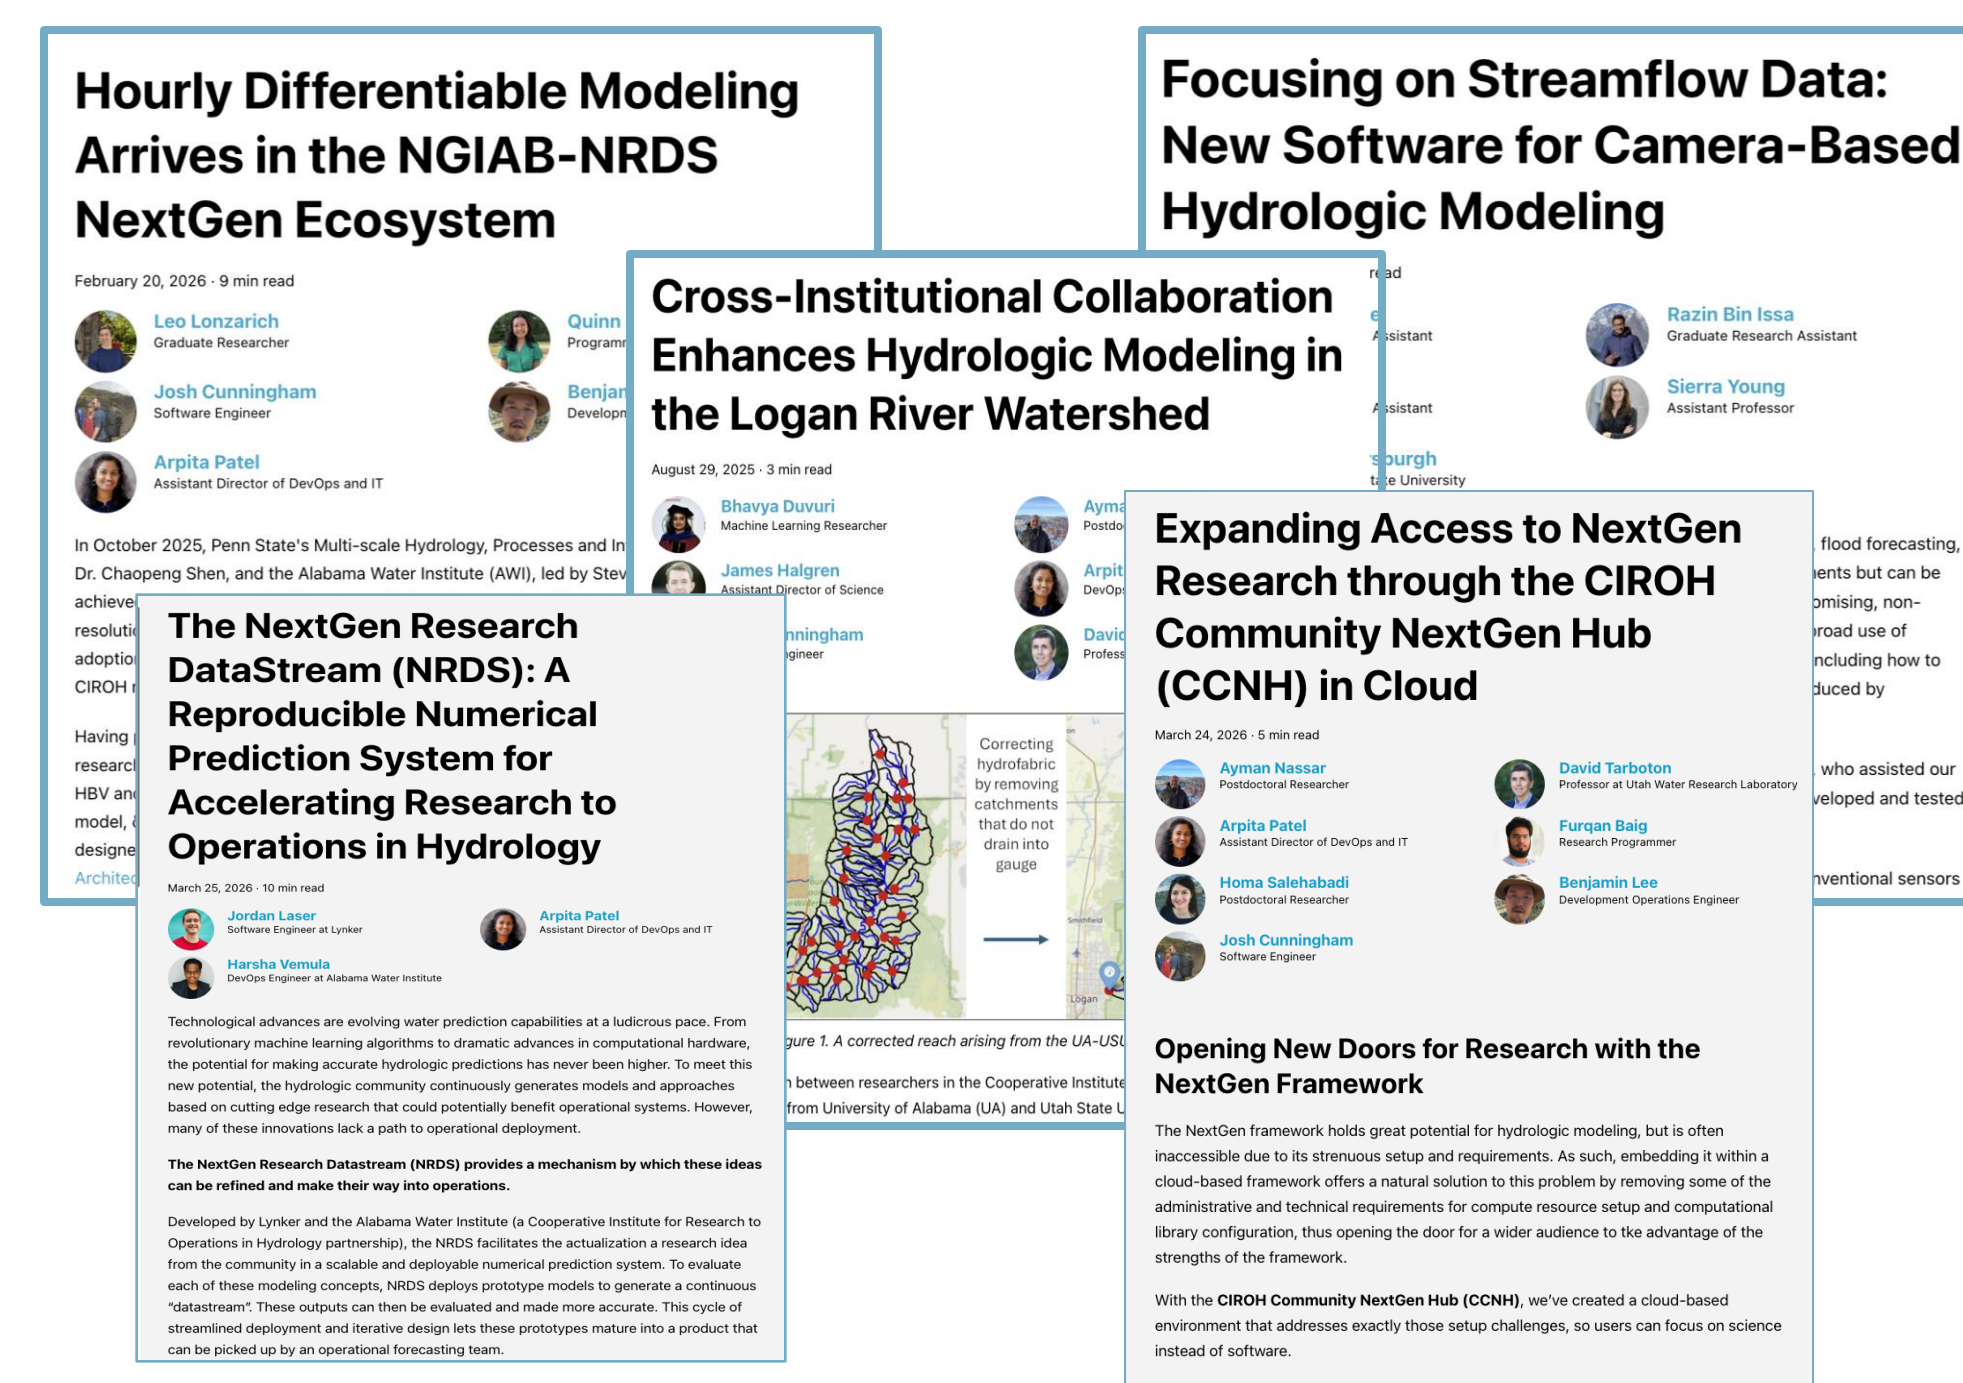

Conclusion

CIROH Hub represents a significant step forward in CIROH's commitment to open science and community collaboration. With over 5,000 combined users already engaging with its predecessor sites, CIROH Hub is well-positioned to expand the reach and impact of CIROH's work as the consortium enters its next phase. As contributions grow, CIROH Hub will continue to evolve as a platform for strengthening collaboration, accelerating research into operations.

Impact and Usage

CIROH Hub bridges the gap between research and application by bringing together research outputs, datasets, web applications, publications, and learning resources in one place.

Services and Outreach

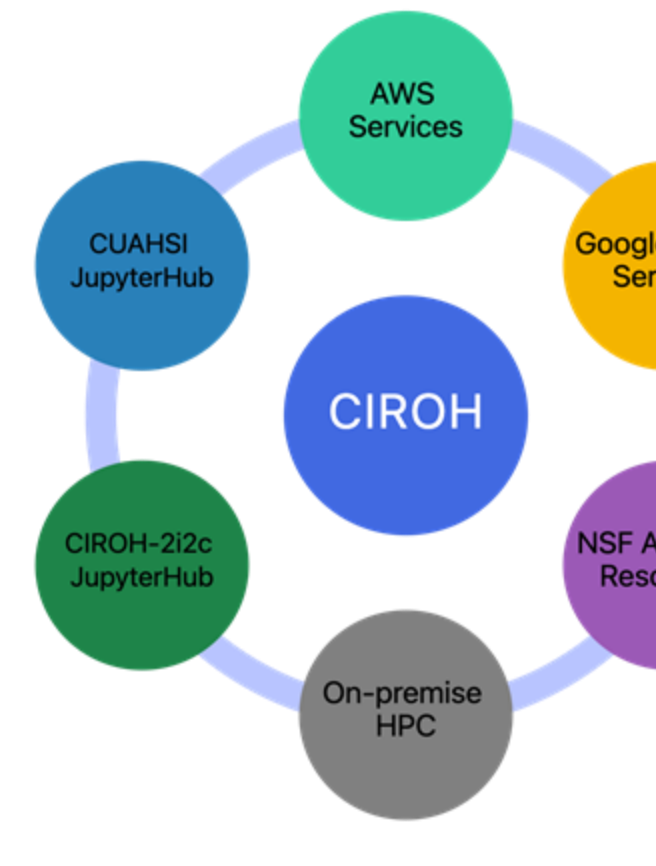

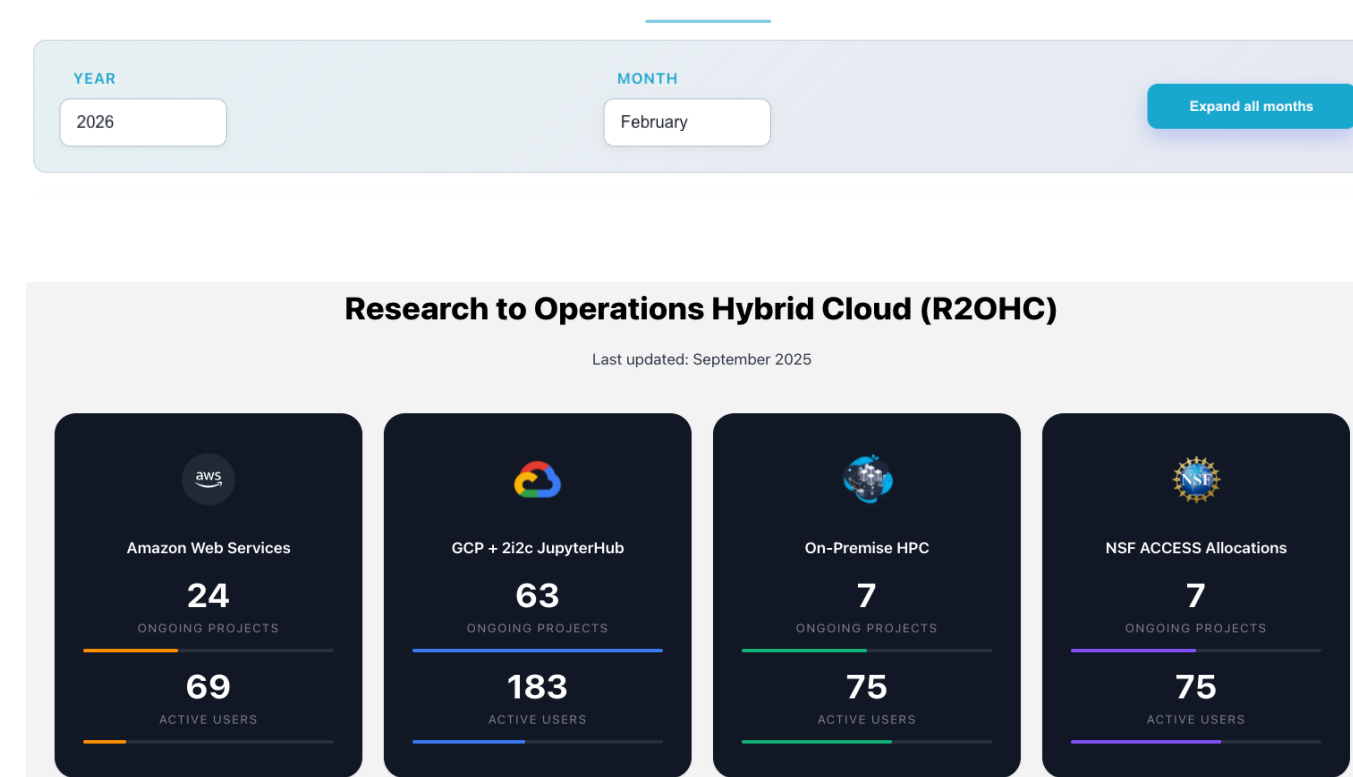

R2OHC Infrastructure Access: This section helps researchers determine which computing resources best fit their research needs and request access to those resources, supporting CIROH's Research to Operations and Hydrologic Community (R2OHC) goals.

News and Blog: The News and Blog sections post regular updates from the CIROH Science and Technology team. The Blog section is open to community contributions, allowing members of the community to highlight their work.

Working group and policies: Hub has a section that highlights CIROH's Working Groups. It makes it easy for researchers to find and collaborate with colleagues with shared goals. Additionally, "Policies" section provides practices that promote CIROH's core tenet of open science.

Community NextGen Updates

Stay connected with the latest developments in NextGen water modeling! This news hub brings you updates, breakthroughs, and opportunities from across our community of practice.

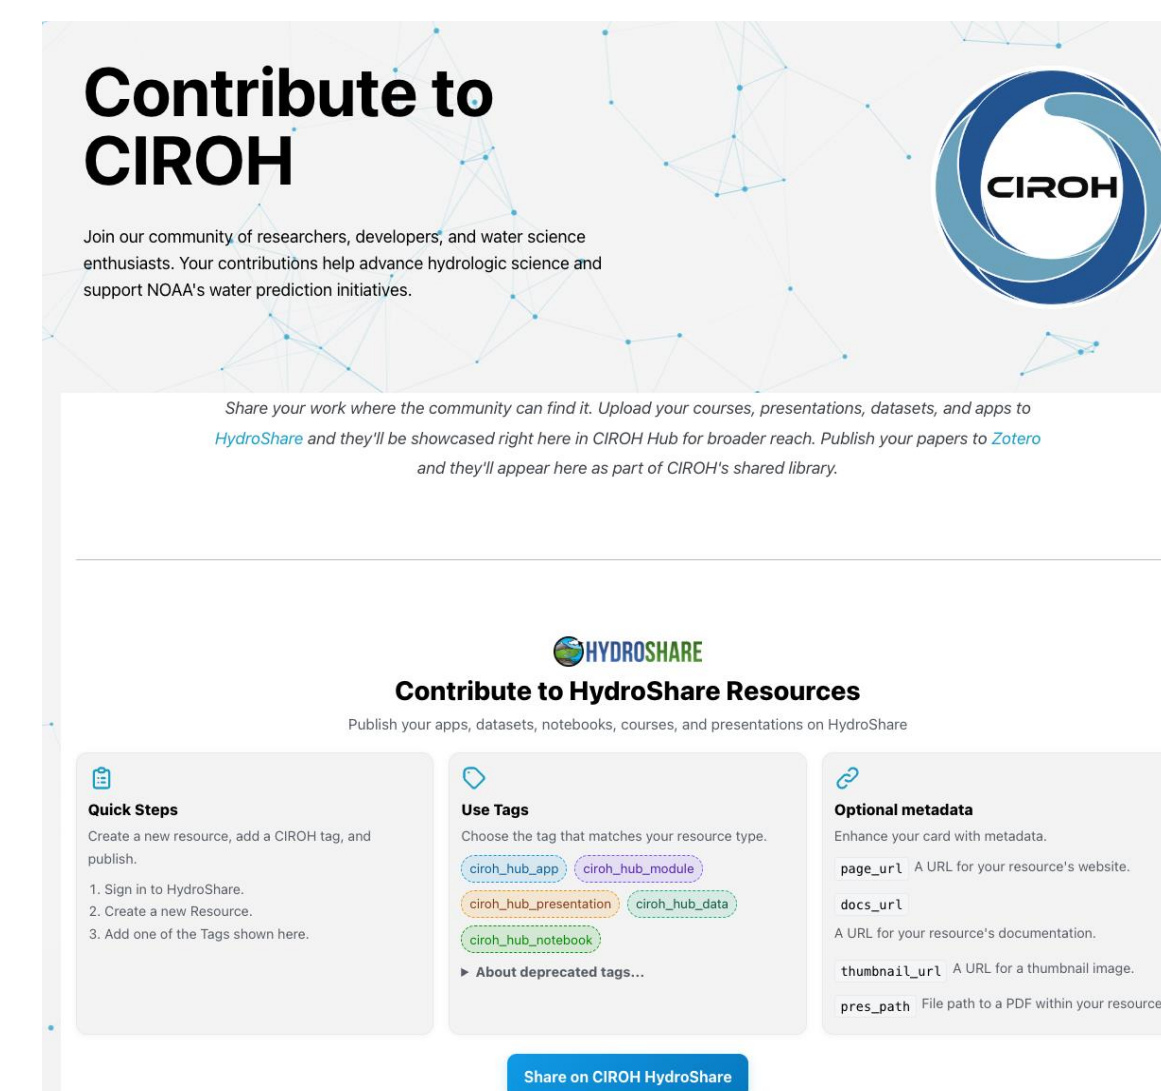

Contributing to CIROH Hub

Dataset, App, Notebook and Presentation: Upload your resource to HydroShare, add matching `ciroh_hub_*` tag, and publish.

Publication: Install Zotero and create an account. Request access to CIROH Zotero group and add your paper by DOI.

Resources Documentation: Submit a pull request to the CIROH Hub GitHub repository with a markdown page covering your tool's description, features, and getting started links.

Get Involved: Join the Community Resources Working Group to suggest improvements and share ideas.

Acknowledgement

This research was supported by the Cooperative Institute for Research to Operations in Hydrology (CIROH) with funding under award NA22NWS4320003 from the NOAA Cooperative Institute Program. The statements, findings, conclusions, and recommendations are those of the author(s) and do not necessarily reflect the opinions of NOAA.

Visit CIROH Hub

Scan the QR codes to visit our website and GitHub. Share your datasets, apps, learning modules, publications, documentations, and other resources to make your work accessible across our consortium.
